# **NEVER POUR LEFTOVER PAINTS DOWN THE DRAIN**

## **CLEANING UP AFTER PAINTING**

**(Industry standard for Water-based paint)**

### **EXCESS/UNWANTED PAINT**

- At the completion of a painting job, pour, brush or roll excess unwanted paint onto an absorbent material such as kitty litter, old rags, newspaper, cardboard, etc.
- Allow paint to dry, this could take up one week, then dispose with household waste collection services.

### **WASHING OF EQUIPMENT: (Two-Container Method)**

- **20 Litre containers are best!**
- Wash brushes, rollers and other equipment in the **FIRST** container of water.
- Transfer the washed equipment to the **SECOND** container filled with clean water for a final rinse.
- Allow the containers to stand, overnight the paint solids will settle to the bottom, this usually takes about 12 hours. The clear water from the **FIRST** container may now be poured on the garden where it will be absorbed into the ground. Avoid areas near drains, streams, rivers or lakes.

### **DISPOSAL OF RESIDUE:**

- Paint solids at the bottom of the first container can be scraped onto an absorbent material as previously described. Allow to dry, then dispose as previously described.
- The **SECOND** container can now be used as the first wash. Follow this cleaning system until the job is completed.

### **CAUTION:**

- Never allow waste water to enter household storm water drains or sewers.

## **DISPOSAL OF LEFTOVER PAINT CONTAINERS**

### **EMPTY OUT CONTAINER**

Ensure paint container is as clean as possible.

### **RECYCLE STEEL CONTAINER**

- The cleaned paint container can be disposed of via local steel recycling programs (check with your local Council).
